Professional Summary:

I am a third-year student at the North-West University. I am about to complete my bachelor's degree in information technology. During my three years of studying at NWU time management and meeting deadlines became critical skill due to strict time frames.

Working on projects in teams made me realise how important my role was to coordinate projects until they were finalised and presented. Working with a team taught me to be more flexible in my approach to ensure the best possible result even if not everyone contributed to the project 100%.

I am intrigued by finding solutions to difficult and complex problems, breaking them down into smaller fragments until I find the optimal solution.

I have two years of coding experience. Most of my coding experience is in the C# and Java languages. My favorite module thus far has been Networks. I am intrigued by networking technologies and network engineering.

I am an extremely motivated and disciplined individual. My studies thus far are testament to how committed I am to complete any task given. During my two and a half years at NWU, my average for modules completed is 73%, and I have never failed any subject, nor have I been required to rewrite an exam.

I trust that my aspirations and attributes will be of great value to your business and that I would be considered for a position at your company.
